

SMART™ PRODUCT FAMILY

SMART™ is comprised of a variety of inter-related database modules. While each module is integrated with the others, access to certain information and functions are restricted to specific user levels. SMART supports barcode scanners, touch screens and/or keyboard input.

SMART™ provides several levels of support for school, corporate and military cafeteria managers. First, you have full tracking of each operator and their sales. Second, you have extensive contact and account information for each student and/or staff member. Third, you have complete control over the items you offer including taxation at the item level. The POS terminals allow for both cash transactions AND debit transactions which alert the operator of low balance conditions as well as adjusts individual pricing according to pre-set account information. SMART provides a variety of mgmt. and gov't reporting.
